

$$d_\ell = A_{\text{tSZ}} C_\ell^{\text{tSZ}} + A_{\text{CIB}} C_\ell^{\text{CIB}} \quad (\text{fixed templates, free amplitudes; CIB is the only FG})$$

FLAMINGO L1_m9 $q > 5$, no-deproj. HILC. Orange shows the CIB component only; it is correlated with tSZ. Purple uses the full Σ_A ; green is $1 \pm \sqrt{(\Sigma_A)_{tt}}$.
